

## Public Security Innovation Center

**PSIC stands for Innovation , Integration , Interoperability**

**PSIC delivers innovation, integration and interoperability in public security for end-users worldwide. As an independent and open platform for proven technologies in public security, The Public Security Innovation Center (PSIC) offers a vast network of integrated security solutions, linking vendors to government, business, volunteer organizations, and the public.**

PSIC creates opportunities to markets and sells to end-users worldwide through a state-of-the-art demonstration center, trade missions, conferences and special events and carries out market research, market entry and international sales channel development for PSIC Participants. PSIC brings innovators to the market through pro-active, unique and customized outreach and matchmaking. PSIC links participating companies with end-users, resulting in unique public security solutions for each.

### Creating New Solutions Together

PSIC brings together public security technology innovators. These are the participating companies, or PSIC Participants, which represent a wide range of information management and physical security solutions. They have been vetted and have demonstrated proven technologies through a number of criteria in order to participate in the forum.

### Participants

Most PSIC Participants are small- to medium-sized enterprises (SMEs) that foster innovation as part of their corporate culture and can benefit from a collaborative environment to maximize business value. By bringing Participants together, PSIC fosters the application of all forms of technology to deliver more effective emergency decision-making for natural, technological and terrorist events. As a result, Participants innovate technologies and develop specific solutions for clients, the end-users.

### End-Users

PSIC is a forum that links public security technology providers with end-users. Thus, it is not about research or innovation in a vacuum. End-users (governments, voluntary organizations, and commercial companies) can bring their specific needs to PSIC and have a solution developed or adapted for them. They can experience the technologies at the PSIC Demonstration Center in The Hague, or they can meet and interact with Participants through special events such as trade missions to new markets or customized matchmaking trips.

## Demonstration Center

The PSIC Demonstration Center is a state-of-the-art facility dedicated to fostering innovation, integration and interoperability in public security. PSIC provides a venue in which to simulate real-life scenarios and demonstrate public security technologies. It brings together solution providers in an environment of collaboration, integration and interoperability. It is located in the World Forum in The Hague in the Netherlands.

## PSIC in Public Security

- PSIC employs technologies created for and used by all public security organizations – governments at all levels, business and industry, voluntary organizations, and the public.
- PSIC addresses scenarios of all types of hazards – natural disasters, technological failures, and terrorist attacks.
- PSIC enables improvement in the major functions of public security – assess, decide, resource, monitor, manage, and evaluate.
- PSIC challenges its members to innovate through technology development and information sharing to achieve more effective prevention, protection, response information, and recovery management.

Managing all types of hazards is part of the fundamental philosophy of technology innovation. True, many hazards require specialized treatment (radiation sensors, flood forecast models, chemical dispersion algorithms, fingerprint records, etc.), but the data acquired by such specialized technologies has a common requirement that PSIC supports – it must be shared among appropriate organizations. Thus, PSIC connects specialized technologies with all organizations, a requirement made possible by the adoption of middleware architecture. In every way, PSIC touches all hazards, supports all organizations, and contributes to effective management of the lifecycle of public security.

## International showcase

International companies specialized in security technology can also become a member of PSIC. Parties with a proven solution for the public security market are welcome to showcase their technology. The PSIC board decides whether such a solution fits into its model. If your company fits the requirements, PSIC can facilitate the entrance into the Dutch market - and beyond. PSIC reaches a large international audience. It has already welcomed government officials from European countries, police staff from South Africa, hotel security officials from Dubai, to name but a few.

**For further information and for conditions to participate in the Public Security Innovation Center, please visit our website <http://www.psic.eu> or contact us:**
