

Event	Interview
Interviewee	Mr. Vasiliy Kikinezhdi Director, Dobrobud Company www.dobrobudltd.com.ua
Date	April 2011

Eunite Ukraine (EU): What does the Ternopil City Stadium reconstruction mean for you, as the general contractor of this project?

Mr. Vasiliy Kikinezhdi (VK): For Dobrobud, reconstruction of the Ternopil City Stadium is, first of all, a business project. But participation in this project is not only for possibility of getting profit, - this is also a confirmation of reliability, stability and competitiveness of Dobrobud LLC among other construction companies of our region, since we have won the right to get this order an open tender. Besides, it is a satisfaction to know that we have got a chance to improve our native city and leave something useful after us, providing Ternopil citizens and guests with comfortable leisure time.

EU: What are the main deliverables of the Ternopil City Stadium reconstruction project?

VK: The reconstruction project, according to which Dobrobud LLC fulfils works, includes installation of roof cover over stands, completing inside and outside furnishing works at spectator stands and façades, replacement of plastic seats, development of surrounding territory.

EU: What is the current state of stadium's readiness? Which works are still in progress?

VK: The installation of roof cover over southern stands is completed; currently, the roof is being installed over eastern stands. The spectator seats of southern and eastern stands have been dismantled, and the preparation works for furnishing are being performed there. All footings are completed for columns assembly, with the following assembly of other roof structures, including northern stand. The works for production with the following assembly of other roof structures are in progress, as well as preparation works for furnishing and plastic seats installation.

EU: What is the budget of this project? How is the project financed?

VK: The budget of this project is 10.5 mln. hryvnya. At the moment, 27% of the planned funds are already spent. The project is financed solely from the local budget. The Customer is the Department of family, youth policy, sport and tourism of the Ternopil City Council.

EU: Is it planned to engage foreign experience in the framework of this project?

VK: In the process of construction and assembly works on this project, the workers of Dobrobud LLC are using best practices gained both in Ukraine and abroad. The technologies applied by our specialists are among the best

construction technologies, which allows offering to the Customer non-standard and interesting solutions with the optimal value for money. That, in our opinion, ensured us winning the tender.

On the one hand, Dobrobud LLC (experience in construction – 14 years) is a strong and knowledgeable construction company with a full cycle of human, physical and technical resources, able to build project of high complexity. On the other hand, we are relatively young and ambitious team which is not going to stop moving and aims at further development, implementation of new technologies and reaching the new heights of professional expertise.
